

# Alien Taxonomy

You are an alien taxonomist. Your job is to classify the aliens found on the planet Bizarro-World. You have noted that there are two main groups of organisms on this planet: a group of humanoid like organisms that live on the land, and a group of fish like organisms that live in the water.

The fish like organisms are photosynthetic and get their food from Bizarro-Sun, the humanoids eat the fish-like organisms.

Because there are so few species, your taxonomic scheme will only use Kingdom, Phylum, Genus and Species. Create a flow chart showing the organisms taxonomic structure, and make up names for the taxa. Give all of the aliens a scientific name. The aliens on Bizarro-World are pictured below, cut them out to help you organize the groups.
